Anticoagulation Pharmacology Puzzle OMS-1
Bill Wightkin, PharmD, MS

Across
2. ALTEPLASE — Fibrinolytic used for stroke
5. FONDAPARINUX — Pentasaccharide anticoagulant
6. PHYTONADIONE — Drug which reverses warfarin
10. EPTIFIBITIDE — Blocks IIb/IIIa receptors
12. HIT — Severe autoimmune reaction to heparin
13. PROTAMINE — Reverses heparin
14. BLEEDING — Major anticoagulant adverse effect
16. PROTEINC — Natural anticoagulant decreased early by warfarin
17. INR — Lab test to monitor warfarin therapy

Down
1. PTT — Lab test to monitor heparin therapy
2. ASPIRIN — Blocks production of thromboxane A-2
3. LMWH — Drug class for enoxaparin (abbrev.)
4. TEN — Clotting factor inactivated by rivaroxaban
5. FFP — Blood product to reverse warfarin (abbrev.)
7. ANTITHROMBIN — Heparin works by binding to this substance
8. WISCONSIN — State where warfarin discovered
9. CLOPIDOGREL — Inhibits platelet ADP receptor
11. THROMBOLYTIC — Converts plasminogen to plasmin
15. SEVEN — Time to steady-state anticoagulation with warfarin: _____ days
