Drugs for Diabetes
Bill Wightkin, PharmD, MS

Across
3. Induces satiety when injected with mealtime insulin
4. Common adverse effect is flatulence
7. A drug that increases natural GLP levels
11. IM drug for hypoglycemic rescue
13. A basal insulin
14. Cloudy intermediate duration insulin
15. Inhibits renal tubular glucose transporter
16. DPP-4 inhibitor drug stem
17. Drug group that improves peripheral insulin sensitivity (Abbrev.)
18. Insulin doses that adjust for pre-meal hyperglycemia
20. Derived from Hila monster spit

Down
1. Can cause lactic acidosis
2. Long-acting insulin analog with fatty-acid chain structure
5. Most effective drug class in reducing A1C
6. A rapid-acting insulin analog
8. Can cause edema and CHF
9. Depolarizes beta-cell to secrete insulin
10. Short acting oral hypoglycemic that blocks K-ATP channels
12. Receptor stimulated by dulaglutide
Drugs for Diabetes
Bill Wightkin, PharmD, MS

Down

19. Short acting insulin given intravenously
